

## **Recommended Cleaning Guidelines for Fabric Wrapped Acoustical Products**

Frequent vacuuming or light brushing is recommended to remove dust and grime.

For general dirt or grime spots, use a “dry wall chemical sponge” which can be purchased at local hardware stores. Two (2) specific brand names are Dover Dry Wall Sponge or Speedy Sponges. Follow directions on the package.

Oil and grease type spots will respond to mild solvent or dry cleaning agents. When spot cleaning with either of those agents, follow instructions carefully and clean only in a well ventilated area. Avoid any product which contains carbon tetrachloride or other toxic materials. The blotting technique (without rubbing) should be sufficient to remove most oil and grease type spots.

### **Notes:**

1. KNC recommends pre-testing a small area before proceeding to spot clean the fabric with any cleaning agent.
2. If panels get water stains from an excessive amount of water, there is not a cleaning agent that will remove a water stain. KNC would recommend replacing the panels.
