

# KINETICS NOISE CONTROL

## Hi-Tack

**Hi-Tack Wall Panels** are ideal for applications requiring high tackability. In addition to tackability, Hi-Tack Panels may be perforated (optional) to provide increased levels of sound absorption in the space.

Made especially for areas requiring tack boards, Hi-Tack fabric covered wall panels are the ideal solution for highly tackable wall surfaces in conference rooms, offices, hallways, and classrooms.

Hi-Tack panels are constructed from 1/2", or 3/4" thick 24 PCF density mineral board wrapped in your choice of fabrics from the FR 701 Collection from Guilford of Maine or factory-approved, customer provided materials. Also available in 16 PCF density core.

When paired with HardSide acoustical panels, Hi-Tack provides highly tackable wall surfaces that blend visually with sound absorbing panels.
